

# Zerto Migration for AWS: Now Available on AWS Marketplace

## Simplify migrations to AWS!

Zerto, a Hewlett Packard Enterprise company, can accelerate and enhance your Amazon Web Services (AWS) journey by simplifying migrations to AWS with a software-only solution purpose-built for native AWS services.

Zerto for AWS Migration licensing is now available on the AWS Marketplace as the second solution AWS users can subscribe to today!

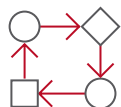

Zerto has been an industry leader for over a decade by providing the best recovery point objectives (RPOs) and recovery time objectives (RTOs) at scale, including orchestration and automation of the entire recovery or migration process in enterprise, virtualized, and cloud environments. Whether your organization is moving to AWS for the first time, has already migrated to a full or hybrid AWS environment, or has cloud-native applications born in AWS, Zerto has the solution to help you lower your costs and unlock the full potential of AWS as an enterprise IT environment.

## How it works

Zerto for AWS uses continuous data protection (CDP) and journaling, along with AWS cloud-native replication, to protect VMs both from on-premises to AWS and across regions within AWS. Nondisruptive testing across your AWS workloads allows you to validate recoverability, perform a migration dry run, or test against production replicas—all with no impact to your production environment or protection.

Our scale-out virtual appliances, with built-in network optimization, encryption, and quality of service, replicate every data change in near-real time.

Simple orchestration workflows allow replication and migration to AWS with only minutes of downtime, even at enterprise scale.

Rapid tests and one-click rollback functionality enable you to easily perform dry runs before committing to a migration.

Zerto feature	Benefit
Enterprise scalability	Through an agentless, native integration approach, Zerto for AWS users can migrate and protect thousands of VMs or Amazon EC2 instances.
Application-centric management	Utilize Zerto Virtual Protection Groups (VPGs) to protect, recover, and migrate all VMs or instances associated with an application to, from, or within AWS.
Orchestration and automation	Easily configure protection for an entire multi-VM application using predefined settings, such as VM boot order, network configuration, and re-IP.

Check us out on the AWS Marketplace here.

### About Zerto

Zerto, a Hewlett Packard Enterprise company, empowers customers to run an always-on business by simplifying the protection, recovery, and mobility of on-premises and cloud applications. Zerto eliminates the risk and complexity of modernization and cloud adoption across private, public, and hybrid deployments. The simple, software-only solution uses continuous data protection at scale to solve for ransomware resilience, disaster recovery, and multi-cloud mobility.
